

NEWPORT QUAYS

Civil and Allied Technical Construction are proud to be involved with the project at Newport Quays where Multiplex/Urban Construct are the major developers. The large multi skilled construction site has Jervis Bridge at the north boundary and the Port River and Ethelton Station to the side boundaries.

Extraordinary civil skills and attention to environment, quality and safety are key objectives to the project. Two large gross pollutant traps were provided to the stormwater drainage system to environmentally control the collected water discharge into the Port River.

CATCON are undertaking major infrastructure works, road works, underground services, electrical services and lighting. Urban works included soft landscaping, trees, architectural structures, concrete promenade works and three jetties onto the Port River.

QUICK FACTS

- >> Located on the Pt. Adelaide waterfront in SA
- >> Works included pollutant traps
- >> Three jetties on to the Pt River constructed by CATCON
